

Mark Omelyanenko

Graduate Software Engineer

✉ mark.omelyanenko@gmail.com ☎ +48 733 892 213  [LinkedIn](#)  [GitHub](#)  [Portfolio](#)

Summary

Computer Science graduate (Poznan University of Technology, Erasmus+ at UMONS, Belgium) focused on Java/Spring backend development, with commercial backend experience, open-source Java contributions and deployed full-stack projects. Based in Poznan and open to relocation.

Skills

- **Languages:** Java, Kotlin, Python, TypeScript, SQL
- **Backend:** Spring Boot, Kafka, Redis, REST API, microservices
- **Databases:** PostgreSQL, MongoDB, MySQL
- **Testing & Tooling:** JUnit, Maven, Git, Postman, GitHub Actions
- **Infra & Cloud:** Docker, Linux, Jenkins, GCP, AWS
- **Observability:** Prometheus, Actuator

Education

B.Sc. in Computer Science

October 2022 - February 2026

Poznan University of Technology, Poland

Thesis: Tournament Management Platform (team project, in active use by Greater Poland Table Tennis Association)

Erasmus+ Exchange Program - B.Sc. in Computer Science

September 2024 - June 2025

University of Mons (UMONS), Belgium

Open Source Contributions

Open Source Contributor — JabRef

2 merged pull requests — *Java, JavaFX, JUnit, Gradle*

- [PR #16212](#): Fixed a race condition in asynchronous search handling that allowed outdated results to overwrite the latest query; added a deterministic regression test for overlapping searches and incorporated maintainer review feedback.
- [Issue #16208](#) · [PR #16218](#): Resolved macOS-specific keyboard shortcut test failures by introducing platform-aware synthetic key events, re-enabling four previously skipped cross-platform tests.
- [PR #16145](#): Identified and reproduced an architecture-test regression in another contributor's pull request using a clean upstream checkout, helping maintainers isolate and revert the affected integration.

Work Experience

Software Engineer Intern

May 2025 – August 2025

SynergySoft

- Developed Spring Boot backend features for client-facing systems, including REST endpoints, request validation, error handling, and service-layer logic.
- Improved test coverage with JUnit for authentication, payment-sensitive, and core backend flows, helping catch regressions before release.
- Worked in an Agile team environment, contributing to standups, sprint planning, code reviews, and technical discussions.

Projects

Marketplace Platform — Built and deployed a 12-service marketplace platform with separate Partner, Buyer and Operations portals, API Gateway routing, rate limiting, request traceability, Kafka-based asynchronous processing and PostgreSQL-backed order/payment flows.

Technologies: Java 21, Spring Boot, Spring Cloud Gateway, Kafka, Spring Data JPA, PostgreSQL, Flyway, React, Docker, Maven, Actuator, Prometheus, Swagger/OpenAPI, deployed on GCP

GitHub Link: [Project Repository](#), Live Demo: [Link](#)

- Implemented idempotent payment creation, signed webhook verification and transactional outbox processing for reliable order/refund state changes.

- Added observability with Actuator, Prometheus metrics, structured logs and correlation IDs to make failures easier to trace across services.

Crypto Exchange Simulator — Built a full-stack crypto exchange simulator with JWT authentication, wallet management, order execution, live market data streaming and Redis-backed rate limiting.

Technologies: Java 21, Spring Boot, Spring Security (JWT), Spring Data JPA, PostgreSQL, WhiteBIT API, Redis, Kafka, React, SSE, Docker, Maven, Jenkins, deployed on AWS

GitHub Link: [Project Repository](#)

- Integrated WhiteBIT market data with scheduled refreshes, Redis caching and SSE updates for responsive real-time price display.
- Added deposit/order limits, idempotent operations, Dockerized services and Jenkins-based deployment to AWS.

Tournament Management Platform — Full-stack platform built as a bachelor's thesis project with two teammates, actively tested by the Greater Poland Table Tennis Association post-graduation.

Technologies: FastAPI, React, PostgreSQL, WebSockets

- Delivered as a 3-person team with close iteration on real user feedback.
- Owned user management, RBAC, and security logic; contributed to automated bracket generation and tournament management.
- Implemented WebSocket-based live match updates tested under real tournament conditions.

Volunteering

Erasmus Buddy

September 2025 – February 2026

Erasmus Student Network (ESN), Poznan University of Technology

Supported incoming international students during their Erasmus+ exchange — assisted with daily matters, organized social activities, and strengthened intercultural collaboration across a diverse student community.

Languages

- **English – Professional working proficiency**
- **Polish – Professional working proficiency**
- **Ukrainian – Native**
